Full Stack Web Developer

Product Team – Berlin, Germany

Full Stack Web Developer

Envio is a technology service provider for building automation and agriculture. Our customers are some of the largest utilities, property portfolio managers, and public/government entities on Earth. As a Full Stack Web Developer we are looking to you to produce scalable software solutions. You'll be part of a cross-functional team that's responsible for the full software development life cycle, from conception to deployment.

As a full stack developer, you should be comfortable around both front-end and back-end coding languages, development frameworks and third-party libraries. You should also be a team player with a knack for visual design and utility.

We expect you to have experience working with StartUps at various stages of growth. Initially this role will be focused on structure and usability, ensuring we are set for our next stage of growth. The role will shift into more design and experience.

At envio we are:

Collaborative - We believe teams solve big problems together

Resourceful - Workable solutions exist for every problem

Resilient - Try a dozen things a hundred different ways if that is what it takes

Disruptors - We invent things people didn't know they needed but can't live without

Pioneers - We take on complex challenges using new tools

Each one of our values is a part of our everyday interactions.

Minimum Qualifications
- ❏ Proven experience as a full stack developer or similar role
- ❏ Experience developing desktop and mobile applications
- ❏ Familiarity with common stacks
- ❏ Knowledge of multiple front-end languages and libraries (HTML/ CSS, XML, jQuery)
- ❏ Knowledge of multiple back-end languages (C#,Python) and frameworks (e.g. Angular, React, Node.js)
- ❏ Familiarity with databases (MySQL, MongoDB), web servers (e.g. Apache) and UI/UX design
- ❏ Excellent communication and teamwork skills
- ❏ Great attention to detail
- ❏ Organizational skills
- ❏ An analytical mind
- ❏ Speak fluent business English

Responsibilities

- Work with development teams and product managers to ideate software solutions
- Design client-side and server-side architecture
- Build the front-end of applications through appealing visual design
- Develop and manage well-functioning databases and applications
- Write effective APIs
- Test software to ensure responsiveness and efficiency
- Troubleshoot, debug and upgrade software
- Create security and data protection settings
- Build features and applications with a mobile responsive design
- Write technical documentation
- Work with insights and controls and other teams to improve software
